COMMENDATION OF DOMAN MOTHERS VIDEO

Dear Sunaina, Sabrina, Monique, and Paloma,

It was a huge privilege listening to your answers and guidance for other parents in this [video](#). It was created by our PR team using your answers during the online Doman Method Course Q&A sessions. Your words were clear and very precise. What you have learned and how well you know your hurt child proves that you are the very best therapist, teacher, coach, and example for your child. As I watched I began to make a list of important notes. Your wisdom is invaluable for a new parent starting on our *Advanced Doman Program*. We greatly appreciate you imparting your knowledge for other parents during the live Q&A sessions during the Doman Method Course -- parents often tell us this is their favorite part of the course.

I learned a long time ago that the parents of brain-injured children need to learn of the potential of their children from other parents. Parents of brain-injured children have reasons to be cynical of the system. For example, they know their child is hyperactive. They take their child to the best organization they can find. The child is evaluated for four days and the parents are told their child is hyperactive. Then they get a \$7,000 bill. Most likely they will be told that their child is hopeless and will only develop to a low level.

You represent the future for parents of brain injured children. Our dream is that when a mother delivers a hurt child in the hospital that the child will be evaluated and placed on the Developmental Profile. She and her husband will be taught a full *Advanced Program* and go home to do it. Imagine how great the results would be for all brain-injured children and their parents.

All of us here at Doman International understand that our results are 100% dependent upon spectacular mothers like you. All four of you are part of a very exclusive small club of super warrior mothers. Brain injury does not have a chance when you appear each morning.

Much love,

Douglas Doman & the entire Staff
